RE: Labadie power plant emissions

I am very concerned about health issues considering the Labadie power plant emits such a high amount of SO₂ in this area. My wife and I have lived here for decades and now have children and grandchildren living closer to the Labadie power plant. Since that plant has not installed pollution controls and since it is the largest SO₂ emitting plant in the country, I am very concerned about health since children, older adults, and asthmatics are especially at risk with high SO₂ emissions.

Considering the plants' emissions are so large, please recommend a non-attainment status for the Labadie plant for the sake of citizens' health.
